

Description:

GoConex eliminates the wire, boxes and labor needed by traditional wired switches. GoConex switches are free from the electrical box and structure. They provide portable, movable, flexible choices to control power.

Installation:

Connect power and the load to the Load Controller. Mount the Load Controller in a junction box or switch box. Pair a GoConex Switch to the Load Controller to turn the load on and off. See goconex.com/support for detailed installation guides.

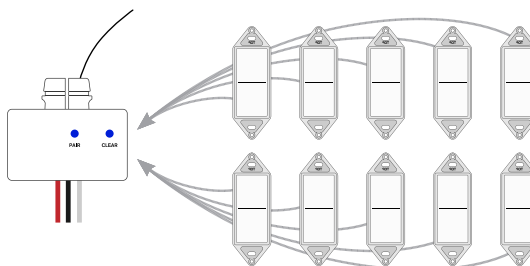

The Switch can be mounted onto any surface: brick, tile, drywall, concrete. Finish with a decora cover plate and GoConex blends in with your other electrical devices. Alternatively, the switch can be portable and move with you in your car or in your pocket.

Specifications:

Voltage	120VAC, 60Hz
Wireless range	200 meter / 600 foot diameter
Frequency	917MHz
Encryption	128-bit encryption
Color	White
Operating temp	0-40°C
Longevity	65+ years at 15 operations per day
Battery	CR2032 3V lithium ion battery
Battery life	8+ years
Environment	Indoor use only

Connections:

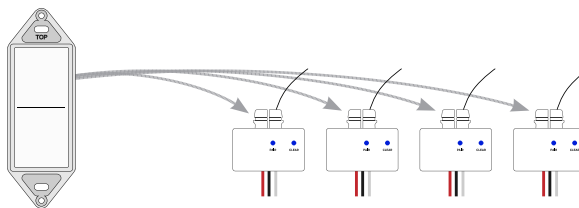

Pair multiple Switches to a GoConex Load Controller to create 3-way, 4-way or even 10-way switches.

Load Controller can receive on/off commands from up to 10 switches.

Physical dimensions:

Length	4.1" (105mm)
Width	1.4" (36mm)
Depth	0.4" (11.2mm)

Switches can control an unlimited number of Load Controllers.

Kits where the Switch is paired together with the Load Controller at the factory are available for your convenience.

Certifications for SC-SW Switch:
 FCC ID: 2ADH9WOWSW1
 IC ID: 12453A-WOWSW1
